Amplifire™

FRESH HOP OIL

FROM BINE TO BOTTLE IN ONE EPIC DAY

NOISIER BREWS

Amplifire™ Oil is our water-soluble liquid dry hop or brite tank addition product. It's also great for hop water. The oil is extracted from 'wet' whole hop cones on the same day they were harvested, meaning straight off the hop plant without any drying or pelletising. You can't get any fresher than that!

BENEFITS:

- Boost flavour and aroma, whether using as a dry hop replacement or brite tank addition.
 - Increase beer yield when used as a dry hop replacement.
 - Variety specific and true-to-type.
 - Quicker filtration and less brewing waste.
 - Increase revenue while reducing environmental impact.
 - Easy to use.
-

RECOMMENDED USAGE:

Always shake the bottle well.

Brite tank:

- Depending on the base beer style, we recommend a dosing rate of 6–20ml per hectolitre of beer.
- Dose the oil into 2–3 litres of your hop water or brew, and agitate to disperse before dosing into the tank. Alternatively, disperse in warm (not hot) water first.
- Dose prior to carbonating to avoid any potential impact on head retention.

Dry hopping:

- Amplifire™ Oil can be used alongside hop pellets during the dry hopping stage, to partially replace hop pellet doses, without sacrificing beer body and mouthfeel.
- A great way to increase beer yields.

For hop water, we recommend a dose rate of 3–15ml per hectolitre of water, depending on your desired level of hoppiness.

STORAGE:

Unopened bottles should be stored at a cool, stable temperature. Once opened, ensure oxygen is purged from the bottle with CO₂ following use, then cool store.
